

Oxygen Updater Privacy Policy and legal information

Last updated: March 4th, 2017.

User data (New in version 1.2.0:)

Whenever a crash or an abnormal situation occurs, Oxygen Updater (from now on called "Application") will send a log report to the Application Server.

These log reports include the following data:

- Incident type (warning, error or complete application crash)
- User selected device and update method
- Firmware-provided device name of the device being used
- Whether or not the device being used is officially supported by the application (if not, the user would have to dismiss a warning screen when setting up the app)
- OxygenOS version installed on the device, or Android version installed on the device in case of an unsupported device
- Installed version of the Application
- Detailed message of the event (in case of a full application crash: a stack trace) and / or short description of the event (in case of a warning or error type event, but not a full application crash)
- Date / time of the event

Previous versions of the Application do not store any user data on the Application Server.

The Application uses Firebase cloud messaging for sending push notifications and Firebase ads for advertisements. This means Firebase may collect user data from users using the Application. That collected data is outside of the control of the Developer of this Application. Please contact Firebase for their privacy policy if you have any issues.

App permissions

The permissions used are required to establish a network connection to the update server (Internet), verify if the device is connected to the Internet (Access Network State) and to download update files (Write External Storage).

Users of Android 6.0 or higher only need to grant the Write External Storage permission when they click on the download button for the first time (Runtime permissions feature).

Legal information

The Application is not an official application from OnePlus or OPPO. You agree to use the Application at your own risk. The Developer of the Application is not responsible for any damage done to your device, your computer or any other property.

OnePlus, and OPPO are the legal owners of OxygenOS. Visit <https://oneplus.net/about-us> to view information about OnePlus.

Android is a registered trademark of Google Inc. Visit <https://www.android.com/> for more information about Android.

Google Play and the Google Play logo are registered trademarks of Google Inc.

Network usage

This app communicates to an Application Server at <https://oxygenupdater.com/api/v1.1>

Furthermore, the Application Server communicates every two (2) hours to: http://i.ota.coloros.com/post/Query_Update . This server is property of OPPO Electronics and is only accessed to insert update information in the database of the Application Server, to allow the data to be accessed by the Application.

Open Source content

This app uses the following open-source third-party add-ons:

- Joda Time: <http://www.joda.org/joda-time/>
- Jackson JSON processor: <http://wiki.fasterxml.com/JacksonHome>
- Android Action Bar Style Generator: <http://jgilfelt.github.io/androidactionbarstylegenerator/>
- Android asset studio: <https://romannurik.github.io/AndroidAssetStudio/>
- RetroLambda and StreamSupport

Original licenses apply where possible.
